As usual, it was much more cost efficient to get the text through than the university bookstore or any other local text book seller that I know of. I found the textbook easy enough to follow and digest, even for the chapters that I didn't find particularly interesting. This version doesn't have the most up to date information, but the basic principles are the same and there proved to be many things I'd never considered before.3 of 3 people found the following review helpful. Great textbookBy AniThis was a required text for one of my classes on psychological testing. It's really a great read. There are so many fascinating topics it covers, including very mundane and dry ones. I liked the writing style and the layout was easy to follow. I highly recommend renting this book, although I did contemplate keeping it. I'm sure I'll get more instruction on this topic in graduate

school, but it definitely made a boring class pretty exceptional. It has a lot of historical content and suggestions for tests. I'm definitely a better test-taker/test-evaluator because of it. It really drills into your head reliability and validity, so it helps with experimental scientific side of psychology as well. 0 of 0 people found the following review helpful. Not a good resource for beginners By CDSI Not a good resource in my experience unless you have previous understanding of the concepts. For me this was a new subject, I had to get it for an assessment class for a Masters in psychology and concepts were not clearly explained. After 4 chapters I stopped reading it as I was getting more confused. May be more suitable for more expert readers.

**PSYCHOLOGICAL TESTING: PRINCIPLES, APPLICATIONS, AND ISSUES**, Eighth Edition, discusses the fundamentals of psychological testing and examines test applications as well as present-day testing controversies.

**About the Author** Robert M. Kaplan is a visiting professor at the Stanford University School of Medicine, where he works with the Clinical Excellence Research Center and the Center for the Advanced Study in the Behavioral Sciences. He is also Regenstrief Distinguished Fellow at the Purdue University. He was the Chief Science Officer in the U.S. Department of Health and Human Services Agency for Health Care Research and Quality (AHRQ) from 2014-2016. Dr. Kaplan served as the National Institutes of Health Associate Director for Behavioral and Social Sciences and Director of the Office of Behavioral and Social Sciences Research (OBSSR). Previously, he was a Distinguished Professor of Health Services and department Chair at UCLA, Distinguished Professor of Medicine at the UCLA David Geffen School of Medicine, and Professor and Chair of the Department of Family and Preventive Medicine, University of California, San Diego.
